The Role of Space Law in Space Activities

Ram Jakhu

McGill Institute of Air and Space Law

Space activities are carried out pursuant to scientific discoveries, with the use of space technology, for meeting various Earthly human needs, mainly pursuant to relevant national public policies, and essentially within applicable legal and regulatory framework(s).

Therefore, for the conduct of space activities smoothly, it is imperative to fully comprehend international space law as well as national space laws and regulations. The value of space policies and the space law-making process, which refers to how space law has been and is being made, should not be underestimated.

This lecture will address some basic principles of international space law as well as Canadian rules and law-making process. The presentation is designed especially for non-lawyers.

Tuesday March 8, 3:30 pm

MSI Conference Room, 3550 University
